Immigration of healthy skin cells to unhealthy sides of the skin in vitiligo

Akbar Mohammadrezaei
Dermatologist, Iran

This article is about a skin disorder which manifests itself as white patches (pigment destruction) in different locations of the body. There are many classifications for this disorder such as segmented, focal, generalized and universal vitiligo. I have mentioned some of the current methods used in the treatment such as UV rooms but there are many risks and long term side effects to it. Besides at the end of the treatment, the patient leaves the clinic without being treated with disappointment. I was suffering from the same disorder for 14 years so I can feel how deep is the depression and suffering of those vitiligo patients. My motivation behind the discovery of this treatment was me myself. I was suffering from the same disorder for 14 years. It was so painful to be out in the society where everybody gazes at you and some are even afraid to talk to you. Because of my economic issues, I did not have access to labs and research centers. So I studied a lot and broadened my understanding and knowledge about human body and biology. After I discovered the treatment, I cured myself in 5 months and then many more patients from England, Iran, Turkey and Azerbaijan. In my article, I have written about some blood tests the patients have to take first and mentioned the vitamins pills and the creams they should use (different for kids and adults). My only intention for writing this article is to let all my colleague dermatologists know about the new treatment. Moreover, the whole treatment takes 5 months or so and is affordable by everybody. If the patients follow the simple advice mentioned in the article the disorder will not come back. I would kindly ask you to go through my article and read it deep. I have treated myself and many others, so I can replicate the treatment on the cases given by you. The treatment and progress is visible from the first month.

Biography

Akbar Mohammadrezaei was born in Urmia in 1986/03/29, in west Azerbaijan state of Iran. I am married with two children, one son and one daughter. I finished my primary education in 1981 and secondary education in 1985, both in Urmia. I was accepted in medicine department in Tabriz, in 1986. I graduated from medicine department in 1995. I did my military service as a doctor in army. I was afflicted by vitiligo for 14 years. The motivation behind this treatment was my own suffering. For years and years I did a lot of studies and then could cure myself in 5 months. I hope all people suffering from this disease will hear our voice and good news.
