15th International Conference on

PHARMACEUTICAL FORMULATIONS & DRUG DELIVERY

September 17-18, 2018 | Philadelphia, USA

Thomas J Webster

Northeastern University, USA

20 years of commercializing medical devices using nanotechnology

The synthetic materials used in tissue engineering applications today are typically composed of a millimeter or micron-sized particles and/or fiber dimensions. Although human cells are on the micron scale, their individual components, e.g. proteins, are composed of nanometer features. By modifying only the nanofeatures on material surfaces without changing surface chemistry, it is possible to increase tissue growth of any human tissue by controlling the endogenous adsorption of adhesive proteins onto the material surface. In addition, our group has shown that these same nanofeatures and nano-modifications can reduce bacterial growth without using antibiotics, which may further accelerate the growth of antibiotic-resistant microbes. Inflammation can also be decreased through the use of nanomaterials. Finally, nanomedicine has been shown to stimulate the growth and differentiation of stem cells, which may someday be used to treat incurable disorders, such as neural damage. This strategy also accelerates FDA approval and commercialization efforts since new chemistries are not proposed, rather chemistries already approved by the FDA with altered nanoscale features. This invited talk will highlight some of the advancements and emphasize current nanomaterials approved by the FDA for human implantation.

Biography

Thomas J Webster's (H index: 84) degrees are in chemical engineering from the University of Pittsburgh (BS, 1995) and in biomedical engineering from RPI (MS, 1997; PhD, 2000). Prof. Webster has graduated/supervised over 149 visiting faculty, clinical fellows, post-doctoral students and thesis completing BS, MS and PhD students. He is the founding editor-in-chief of the International Journal of Nanomedicine (5-year impact factor of 5.03). Professor Webster is a fellow of AIMBE, BMES, IUSBE and NAI. He also served as the President of SFB. He has appeared on BBC, NBC, ABC, Fox News and other news outlets talking about medicine.
