Dental management of children with down syndrome, fetal alcohol syndrome & cerebral palsy

Developmental disabilities can be detected early on and persist throughout an individual's lifespan. Developmental disability that affects all areas of a child's development

Down syndrome is a genetic condition in which people are born with an extra copy of chromosome 21. This extra copy affects the development of the body and brain, causing a range of physical and mental impairments for the individual.

Fetal alcohol spectrum disorders are a group of conditions caused prior to birth that can occur in a person whose mother drank alcohol during pregnancy.

Cerebral palsy is a group of disorders that affect a person's ability to move and maintain balance and posture. They are the most common in childhood.
