Abstract

Background: At national level in Romania, but also at international level, palliative care needs support to support the prevailing activity and developed consistent with the requirements of patients in each country. Although it's a medical segment of important importance to each people, in practice palliative care would wish permanent support.

The patients' families say how difficult it had been for them during this era when a loved one needed palliative care, what proportion they were affected which without the support of palliative care specialists they might not have overcome this stage of their life. In every country there are fruit or vegetable farms, and sometimes these products aren't sold, they break down, while palliative care services need this sort of product.

Keywords: Multidisciplinary team, Palliative care, Palliative patients, Financial support

INTRODUCTION

There are large oil and financial companies, hotels, restaurants and corporations that would help support palliative care. Some large companies are already involved, but choose the palliative care institutions / services they need to support, while another isn't yet involved during this area. This fact led me to propose the change of legislation at the international level within the financial field for those that support palliative care services during a country, taking advantage of tax exemptions or tax facilities additionally to the quantity it offers within the sort of cash sponsorship or products.

The involvement of companies that currently have money isn't at the extent needed for palliative care, but the state's provision of certain fiscal / financial facilities can turn the present situation into a key, innovative solution to support care. palliative.

State institutions that provide settlement of palliative care services can't provide funding at the extent required for this sort of activity, but the involvement of state and personal companies within the support of this sector would significantly contribute to providing quality palliative care services. and their development.

METHADODOLOGY

Palliative care ensures the control of pain and symptoms of patients with chronic diseases that healing is not any longer possible, can we imagine what proportion physical and emotional suffering these patients have, but also their families? We all have the proper to health care, the proper to life, and that i would really like to mention that palliative care is a crucial a part of a patient's life. it's important how a loved one separates from us, we might all wish to be without suffering, in decent conditions, to not be alone when the suffering is extremely great.

I have 14 years of experience in palliative care and that i would really like to inform you a few case I acknowledged about at a world training course in palliative care in my first year of activity: a participant told how an oncology patient had some pain so severe before the top of his life that he tore all his hair out of his head albeit he had received pain control treatment.

There are many possibilities to financially support the palliative care activity:

- food companies can donate 2 euros for a product sold.

- restaurants can deliver several portions of food or their debt instrument .
- large hotels offers within the sort of sponsorship the cash for an area rented to customers.
- those that have farms for animals, vegetables and fruits can donate a monthly amount of products.
- oil companies can support the palliative care activity at national level during a country by involving employees.

Result: We all need a better world, to be treated with respect, with dignity, attentively , except for this each folks must contribute. The patients in palliative care are our parents and youngsters , they represent to us as a nation the way we look after them and that we are with them within the last years or days of life. The change in international palliative care legislation to financially support this activity is meant to be passed on to all or any international organizations involved in palliative care, which fight for patients' rights, the proper to life and to contribute significantly to the care of patients round the world. Currently there are certain financial / fiscal facilities for companies that support social responsibility, they're involved in health projects, but there's no specific specification for palliative care services that require help.

DISCUSSION

We want to try to to well, but this needs more involvement, support from state and personal institutions / companies. The support of palliative care services has effects on the health of patients, relations but also of employees / specialists working in palliative care. For the members, the instant of separation from a loved one through his death is traumatic, so we'd like support in order that we make this separation and transition as painful as possible, to affect the opposite relations as little as possible.

CONCLUSION

There are cases of mothers dying of cancer, and surviving children need help to continue their studies, for food and clothing. For these dramatic situations, the support of the community is vital. The palliative look after children isn't developed at an appropriate level altogether countries of the planet , there are several sorts of chronic conditions that patients need palliative care and that there are not any established palliative care services. The way we become involved in health now can bring long-term benefits to the health of the population. At a gathering with a specialist in 2019, he told me: we've patients from a particular country that I treat for chronic diseases, but who return home and thanks to economic conditions find yourself getting sick again, health can worsen with palliative care services.

For this sort of patients who are during a vulnerable situation and wish help, it's good to intervene to take care of their health and life. That is why I invite you to send this message of advocacy to all or any institutions empowered to amend existing legislation and to involve all organizations to participate financially in supporting palliative care, quality in health and life.
