Abstract

Satement of the Problem: It's a clinical case presentation of a male Preterm infant Newborn (+31 weeks) that was delivered in our hospital & transferred to our NICU because of Prematurity, VLBW & need to respiratory support. Baby shortly undergo Necrotizing Enterocolitis (NEC) on 5th day of life shortly after start of expressed milk feeding! which was early detected by use of Near Infrared Abdominal spectroscopy (NIRS). Baby was deteriorated clinically in a couple of hours & undergo intestinal perforation with peritonitis, up to full feedings with use of Human Fortified Milk (HMF), probiotics & prebiotics.

Findings: The Study stated the evidence-based Feeding Strategies guidelines for necrotizing enterocolitis (NEC) among very low birth weight infants & Role of trophic feedings, Probiotics, Prebiotics & micronutrients in Prophylaxis, Prevention & Management of NEC.

Recommendations: 1)-Prematurity is the single greatest risk factor for NEC & avoidance of premature birth is the best way to prevent NEC. 2)-The role of feeding in the pathogenesis of NEC is uncertain, but it seems prudent to use breast milk (when available) and advance feedings slowly and cautiously. 3)-NEC is one GI surgery in newborns. 4)-NEC remains a major unsolved medical challenge, for which no specific therapy exists, and its pathogenesis remains controversial. 5)-A better understanding of the pathophysiology will offer new and innovative therapeutic approaches, and future studies should be focused on the roles of the epithelial barrier, innate immunity, and microbiota in this disorder. 6)-Bioinformatics modeling is a new emerging strategy aimed at understanding the dynamics of various inflammatory markers and their application in early diagnosis and treatment.

Biography:

Amr I.M. Hawal has his expertise in evaluation and passion in improving the health and wellbeing. His open and contextual evaluation model based on responsive constructivists creates new pathways for improving health care especially in Neonatology field. He has built this model after years of experience in research, evaluation, teaching and administration both in hospital and education institutions. Our case presentation was done in one of the biggest & modern of art & advanced NICU based on tertiary generation level in the region (Latifa Hospital, DHA, Dubai and UAE).
